

FATBOY LIGHT CONTROL

fatboy®

Here's the story

In this age we desire full control, our longing to steer things in the preferred direction is answered by the new Fatboy Light Control app. An app easy to install on your smartphone and even easier to use, creating the right atmosphere at home to match your mood.

Using Bluetooth technology, Fatboy Light Control is a very practical and user friendly app that puts you in complete control of your lighting. Turn your Edison The Giant on and off by simply tapping a button in the app's well-organized interface. Play with the light by dimming it or easily adjust it into the colour that fits your spirit.

Operating the Edison The Giant while lounging in your favourite seat was a longtime desire. Now you get exactly what you wished for. Fatboy's new app allows you to regulate the big floor lamp wherever you are. Gone for a while but don't want to leave an absent impression, or don't want to arrive at an unlit house? No problem: simply use the timer function in the app to have your Edison lit the room any time you want, making your arrival safe and much more pleasant.

Fatboy Light Control allows you to pair up to six of the same Edison's for a simultaneous effect. With a little help of Fatboy, you set your light the exact way you want it.

Nice to know!
